About Us

Introduction

Aerolift L.L.C. is a forward-thinking provider of industrial lifting solutions, equipment rentals, and material handling systems across the UAE. Established with a commitment to safety, reliability, and innovation, Aerolift serves a wide range of industries including construction, manufacturing, logistics, and warehousing.

At Aerolift, we specialize in the supply, rental, and servicing of high-quality lifting equipment such as overhead cranes, jib cranes, gantry cranes, boom loaders, forklifts, and scissor lifts. Our team brings years of industry experience and technical expertise to every project, ensuring tailored solutions that meet our clients' operational goals and safety standards.

We take pride in offering:

- Comprehensive Equipment Solutions
- Timely Support & Maintenance Services
- Customized Installations & Turnkey Projects
- Customer-Centric Approach

Mission & Vision

MISSION

To provide innovative, reliable, and high-performance overhead lifting solutions that enhance safety, boost productivity, and support the growth of industrial operations.

VISION

To be a leading force in the lifting industry, recognized for engineering excellence, customer commitment, and delivering solutions that stand the test of time.

OUR
SERVICES & PRODUCTS

"Your Load, Our Lift:
We Carry What Matter
Most."

Our Services

After-sales support & Maintenance

At Aerolift, we understand that overhead cranes are critical to your operations. That's why we offer specialized after-sales support and maintenance services designed to keep your lifting equipment safe, reliable, and performing at its best.

Emergency Breakdown Services

Rapid response team available 24/7 to handle crane breakdowns, providing on-site diagnostics and repairs to minimize downtime and restore safe operations quickly.

Annual Maintenance Contract (AMC)

Comprehensive service packages including scheduled inspections, preventive maintenance, and priority support to ensure uninterrupted crane performance and compliance with safety standards year-round.

Installation & Refurbishment Services

We offer professional installation of new overhead crane systems and expert refurbishment of existing equipment. Our skilled technicians ensure precise assembly, structural upgrades, and modernization to enhance performance, safety, and extend crane lifespan—all in compliance with international standards.

Our Products

EOT CRANES

Our Single Girder Electric Overhead Traveling (EOT) Cranes are designed for efficient material handling with lower load capacities, offering a cost-effective lifting solution for workshops, warehouses, and light to medium industrial applications.

KEY FEATURES:

- Compact and lightweight design
- Cost-effective for light to medium loads
- Easy installation and maintenance
- Fast access to original replacement parts

Single Girder Crane

A double girder crane features two parallel girders supporting the hoist, allowing it to handle heavier loads and longer spans compared to single girder cranes. It's ideal for heavy-duty industrial applications, offering enhanced stability, higher lifting capacity, and durability.

KEY FEATURES:

- Higher load capacity for heavy-duty lifting
- Greater span capabilities for larger work areas
- Easy installation and maintenance
- Fast access to original replacement parts

Double Girder Crane

GANTRY CRANES

A Single Girder Gantry Crane is a versatile and efficient lifting system that consists of one main girder supported by two legs that run on ground-mounted rails. It is ideal for outdoor yards, construction sites, warehouses, and workshops where an overhead runway system is not available or practical.

KEY FEATURES:

- Lightweight and portable design for easy relocation
- Cost-effective solution for light to medium loads
- Easy assembly and disassembly for flexible use
- Suitable for outdoor and indoor applications

Single Girder - Gantry

Double Girder Gantry Crane

A Double Girder Gantry Crane is a heavy-duty lifting system designed for high-capacity and large-span material handling operations. It features two parallel girders supported by robust legs that run on ground rails, providing greater strength, stability, and lifting height than single girder designs.

KEY FEATURES:

- High load capacity for heavy-duty applications
- Dual girder design ensures superior strength and stability
- Supports larger hoists and higher lifting heights
- Suitable for outdoor and indoor applications

Double Girder - Gantry

GANTRY CRANES

A Semi Gantry Single Girder Crane is a space-efficient and cost-effective lifting system that operates with one side of the crane traveling on a ground rail and the other side supported by a runway beam attached to a building column or structure. It features a single girder design, making it ideal for light to medium-duty applications.

KEY FEATURES:

- Space-saving design
- Cost-effective solution
- Easy Installation & maintenance
- Indoor & outdoor use

Single Girder Semi - Gantry

A Semi Gantry Double Girder Crane is a versatile lifting solution that combines the features of an overhead crane and a gantry crane. It operates with one side of the crane running on a runway beam (typically fixed to a building structure), while the other side moves on rails installed at floor level.

KEY FEATURES:

- High load capacity
- Dual girder design
- Extended span & height
- Easy Installation & maintenance
- Indoor & outdoor use

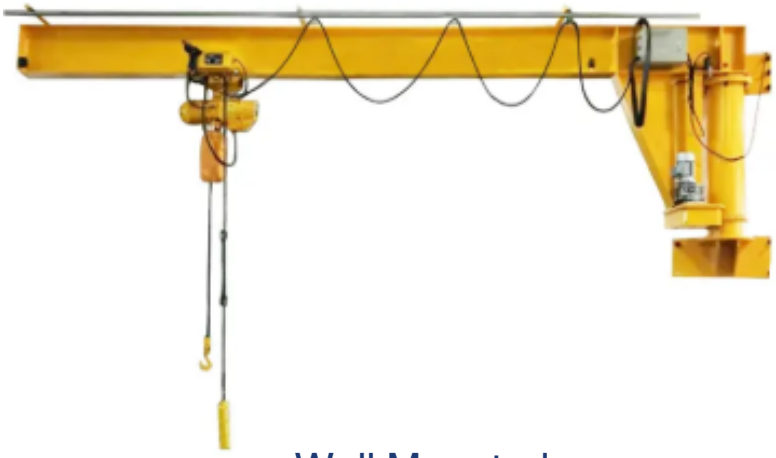

Double Girder Semi - Gantry

JIB CRANES

A wall-mounted jib crane is a space-saving lifting solution designed to handle light to moderate loads without the need for floor space or additional support columns. It mounts directly to an existing wall or building column, providing 180° to 200° rotation for efficient material handling.

KEY FEATURES:

- Ideal for workstations, assembly lines, and small production areas
- Easy installation with minimal structural modifications
- Smooth manual or motorized slewing for precise load positioning
- Cost-effective solution for localized lifting needs
- Complies with international safety standards

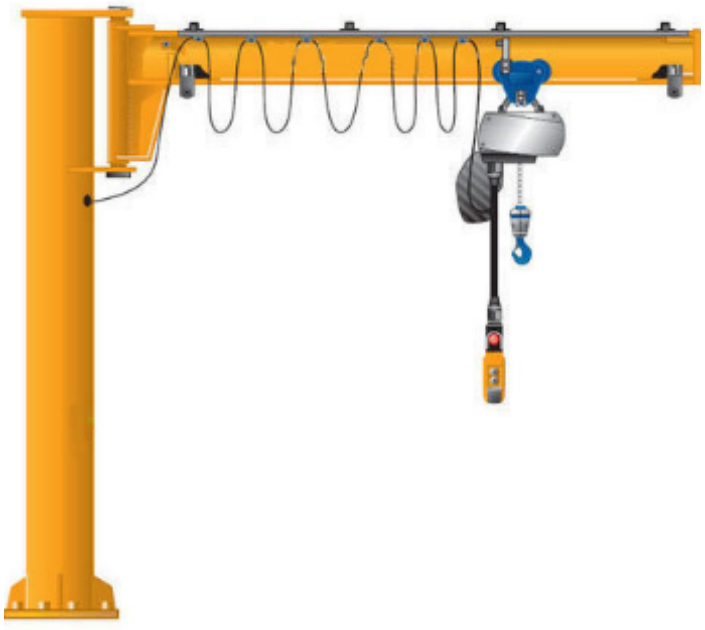

Wall Mounted
Jib Crane

A pillar-mounted jib crane is a free-standing lifting solution designed for 360° rotation and efficient material handling in workshops, warehouses, and production lines. Installed directly on the shop floor using a robust pillar structure, it provides flexible lifting capabilities without relying on building columns or walls.

KEY FEATURES:

- Suitable for light to medium lifting operations
- Offers full 360° swivel for maximum coverage area
- Can be equipped with manual or electric hoist and slewing options
- Ideal for loading/unloading, workstation support, and assembly tasks

Pilar Mounted
Jib Crane

HOISTS

Foot-mounted Hoist

Series: MT (Standard Wire Rope Hoist)
Type: MT305 / MT308 / MT312 / MT316 / MT525
Capacity: 1-5 t
Reeving: 2/1 (2 Rope Falls)
Suspension: F (Foot-mounted, Stationary)

Series: MT (Standard Wire Rope Hoist)
Type: MT305 / MT308 / MT312 / MT316 / MT525
Capacity: 1-15 t
Reeving: 2/1 (2 Rope Falls)
Suspension: LC (Low Headroom, Counterweight)

Monorail Low Headroom Hoist

Monorail Normal Headroom Hoist

Series: MT (Standard Wire Rope Hoist)
Type: MT305 / MT308 / MT312 / MT316 / MT525
Capacity: 1-15 t
Reeving: 2/1 (2 Rope Falls)
Suspension: N (Normal Headroom)

Series: MT (Standard Wire Rope Hoist)
Type: MT316 / MT525
Capacity: 5 - 50 t
Reeving: 2/1 (2 Rope Falls)
Suspension: KD (Double Rail Trolley

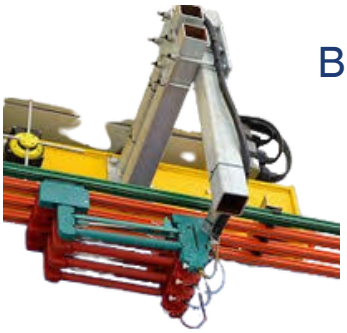

Double-Rail Hoist

Foot-mounted Hoist (True Vertical Lift)

Series: MT
Type: MT305 / MT308 / MT312 / MT316 / MT525
Capacity: 1.5 t
Reeving: 4/2 (True Vertical Lift)
Suspension: F (Foot-mounted, Stationary)

SPARE PARTS

Busbar System

Busbar system is an electrical distribution setup that uses conductive bars or strips (typically made of copper or aluminum) to carry and distribute high current power efficiently across equipment. It is widely used in industrial settings, especially in cranes, overhead systems, factories, and power distribution panels.

Complete brake set refers to the complete assembly of components used to apply and control braking in a mechanical system. It is commonly used in cranes, hoists, elevators, industrial machines, and vehicles to stop or hold moving parts securely.

Electro-Magnetic Brakes

Festoon System

A festoon system is a mechanical arrangement used to manage and guide cables or hoses that need to move along with equipment, such as cranes, hoists, conveyors, or other mobile machinery. These systems ensure that electrical power, control signals, or fluids can be safely and efficiently delivered to moving components without entanglement or wear.

A limit switch is an electromechanical device used to detect the presence or position of an object and automatically stop, start, or control a machine when a limit is reached. It plays a key role in safety and automation systems.

Limit Switches

Hydraulic Brake

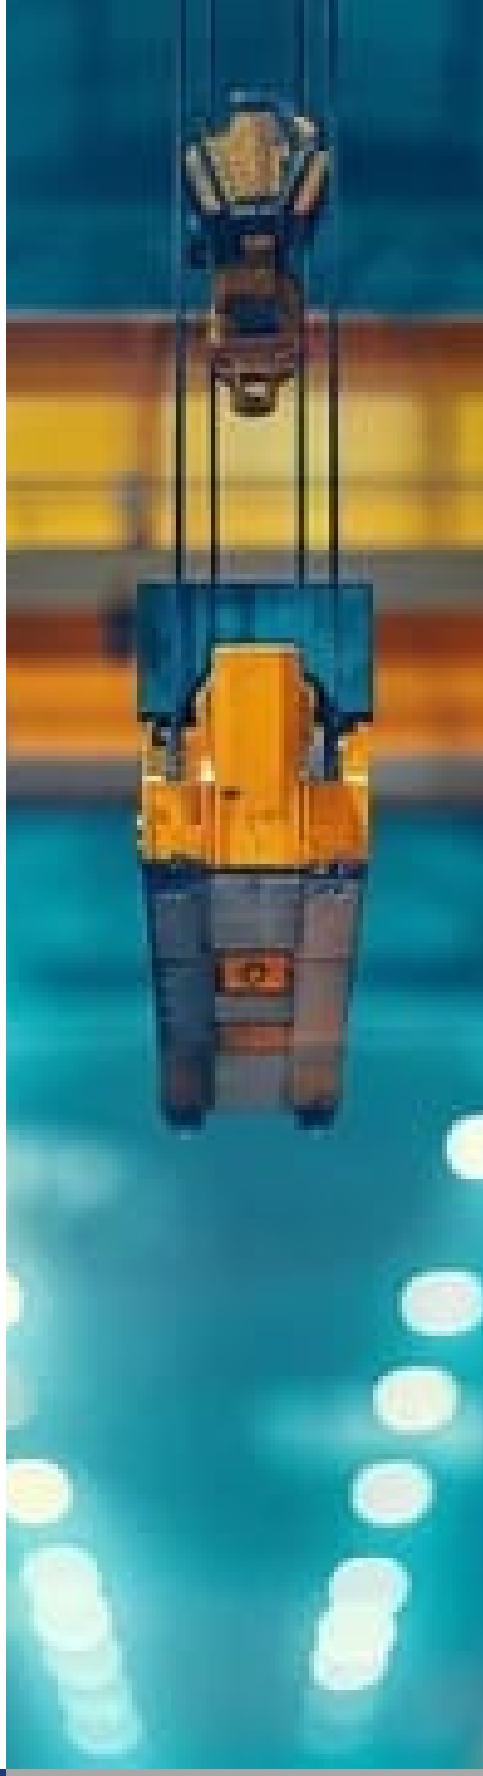

A hydraulic brake is a braking system that uses fluid pressure to transmit force from the brake pedal or lever to the brake mechanism. It is commonly used in vehicles, industrial machinery, and cranes to ensure powerful, smooth, and reliable stopping.

“Aerolift L.L.C. is a trusted name in the field of industrial lifting solutions and equipment rentals, personal with 20+ years of relevant industrial experience. Based in the United Arab Emirates, we specialize in the design, supply, installation, and maintenance of a wide range of lifting equipment to support construction, manufacturing, logistics, and infrastructure sectors across the region. Our team of skilled engineers and technicians ensures that every project is executed with precision, safety, and efficiency. We are committed to delivering reliable, cost-effective, and customized solutions tailored to meet the operational needs of our clients”
